

CLIMATE INTERACTIVE

*Organizations Harnessing Open Source Simulations
to Address Climate Change*

Addressing climate change will require,

amongst most everyone from business and government leaders to global citizens,

exponential, cross-cultural diffusion of two ideas:

1. We need to reduce CO₂ emissions significantly
2. How to do it while supporting our economy

A Group of Leaders was Assembled in 2006 by MIT Faculty at Citigroup in NYC to Found a New Effort

Andrew Jones, Sustainability Institute, Program Director
10 years experience in system dynamics

Dr. John Sterman, MIT Sloan School of Management
Director, System Dynamics Group
Author, *Business Dynamics: Systems Thinking and Modeling for a Complex World*

Dr. Peter Senge, MIT,
Senior Lecturer, Sloan School of Management,
Founding Chairman, Society for Organizational Learning
Author, *The Fifth Discipline*

Marv Adams, Fidelity Investments, President, Shared Services
Former CIO, Citigroup
Former SVP of Corporate Strategy and CIO, Ford Motor Co.

Dr. Michelle Erickson, Citigroup
Director, Sustainability Initiative for Global IT

Michael Richards, Visioneering Partners, President
Former VP of IT, Monsanto
Former CIO, Ford Motor Co.

**In 2006, this small group of leaders
hypothesized it would take:**

accessible, interactive simulations

shared open source

spreading virally around the world

Innovative Organizations have Joined and Grown the Effort

Financial and In-kind Supporters

In-kind Supporters

Sustainability Institute Boosted its Climate Interactive Team

Dr. Elizabeth Sawin - Co-Director of Climate Program, climate science, writing, analysis, presentations

Dr. Phil Rice – Climate science, interface creation, learning design and documentation

Stephanie McCauley - Web development, interface creation, user community management

Dr. Lori Siegel – Simulation research, creation, and testing; climate and energy science

With Partners We Developed C-ROADS the Policy-Maker Oriented Climate Simulation

- Uses MIT-based technology
- Designed for decision makers, not just scientists
 - Runs in less than 0.1 seconds
- Scientifically Reviewed
 - Committee chaired by Dr. Bob Watson, former head of the IPCC

**“C-ROADS reproduces the response properties of state-of-the-art
three dimensional climate models very well”**

- Committee members included Klaus Hasselmann and Stephen Schneider
- Flexible and adaptable to the week’s burning policy questions
- All equations shared and open to scrutiny

With Partners in the Climate Action Initiative, C-ROADS Has Already Impacted Global Decisions

- US State Department Deputy Special Envoy for Climate Change Jonathan Pershing presented C-ROADS slides in plenary to the UNFCCC in Bonn *April 2009*
- Senator John Kerry quoted C-ROADS results and showed graphs in Congress – *January 2009*
- European Environment Agency head, Jacqueline McGlade, quoted C-ROADS in European talks
- Bob Corell quoted C-ROADS in interview on NPR *February 2009*

CI has already Engaged Key Industry, Government, and Institutional Clients ...

Used sims to support a July 2008 “War Game” chaired by John Podesta and covered by ABC News

Created a sim used by Ericsson for climate strategy from shop floor to CEO

Created sim-based slide deck for Dr. Bill Moomaw to present to IPCC committees

Embedded a sim in a video used in sustainability education across the firm

Ran a sim-based workshop in NYC for capital markets analysts on electric generation and climate

Co-created a sim used around the world in seven languages

With MIT, We Developed Interactive Policy Exercises Engaging Diverse Leaders

Oil Executives at MIT

European Business Leaders in Greenland

European Environmental Officials, Copenhagen

Corporate Executives with The Climate Group

Duke MBA Students

Plus:

- Citizen leaders in NH
- Civic leaders in Atlanta
- Society for Organizational Learning (SoL) leaders

Now Technologists and Software Developers Are Asking for Access to the Sims

- **Chinese NGO Civic Exchange (Hong Kong)**

Could we translate the sims into Chinese?

- **Gore's "The Climate Project"**

Could we use the sim to empower citizen leaders?

- **New England Science Museums**

Could we embed the sim in an interactive "touch screen" exhibit?

- **Carbon Quilt**

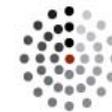

Could the sim drive the visualization of carbon footprint data?

- **Terrestrial Carbon Project**

Could we enhance the sim's forests sector?

- **MIT's Center for Collective Intelligence**

Could we develop "argumentation and deliberation" space?

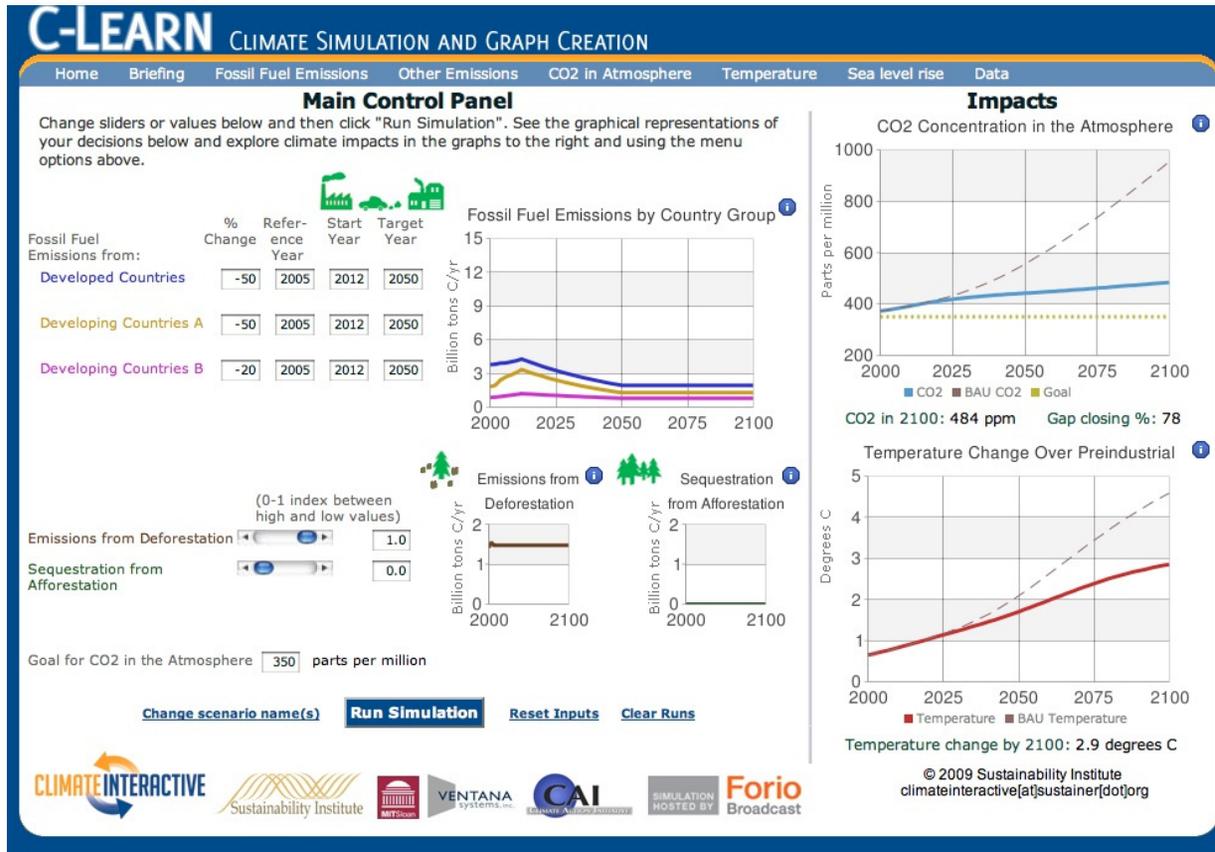

Climate Leaders Around the World Are Also Asking Us to Share Simulation Graphs and Results

- **Todd Stern, Special Envoy on Climate Change, US State Department, via Bob Corell**
Could you run more scenarios?
- **Government of Mexico**
Could we run an online webinar on UN Strategy?
- **Government of Sweden**
Could we give a plenary talk at Sweden's "Political Week" as they take on EU Presidency?
- **The World Bank Foundation**
Could we use it to train developing country climate leaders?
- **Project Catalyst of ClimateWorks**
Could you analyze proposals to COP-15?
- **Peter Senge and BP**
Could we use it to support youth leaders?

To Meet the Overwhelming Demand, We Created C-Learn as Globally-Accessible Online Freeware

We will share:

1. All equations
2. Simulation in Vensim software (with a GPL license)
3. Code to the xhtml interface (with a GPL license)
4. Graph sets with data behind them

Launched May 2009
Available at: www.climateinteractive.org

We Created a Website and Blog to Share the Sims

CLIMATE INTERACTIVE
Vigorous sharing of user-friendly simulations

home | about us | simulations | collaborate | contact us | internal | c-learn simulation

What's new?

Upcoming Climate Interactive Webinar

C-LEARN Learn Modeling and Carbon Capture

Explore C-Learn Freeware Online Simulator

Our Work

Our vision is that interactive, accessible computer simulations help spark action that stabilizes the climate. And we've got simulation tools and resources for communicators and analysts to help make that vision happen.

We are modelers and scientists developing climate simulations, writers and designers

Source Climate Simulations Take Off With Climate Project Partnership
2009 by apjones

Open source climate simulation movement is off and running!

We're thrilled to share that **The Climate Project** — the powerful non-profit founded by Al Gore that trained thousands of climate presenters around the world — is using the beta version of our online freeware simulator, **C-Learn**, to create a K-12 education version of the sim they are calling **RENEW**.

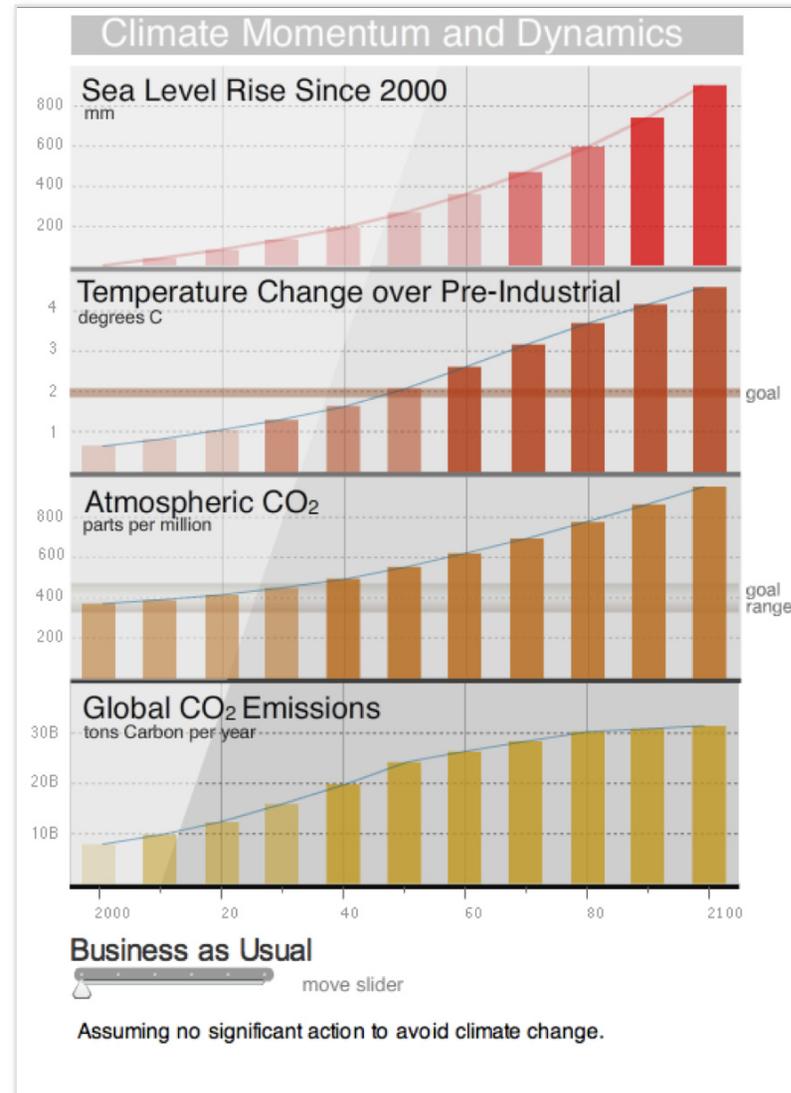

Here at **Climate Interactive**, we couldn't be more thrilled. Back in 2007, visionaries like **Marv Adams**, **Peter Senge**, **John Sterman**, **Mike Richards**, **Michelle Erickson**, and **Chris Johnson**, declared that if we put a simulation online, others would adapt and extend it in powerful ways.

And **THEY WERE RIGHT!**

climateinteractive.wordpress.com

We Created a Prototype “Flash” Animation that Could Spread Virally

- Built using Edward Tufte’s information design approach
- Modeled after the NY Times’ online graphics

Think Bigger. What If...?

(All technically possible but not happening yet...)

- Millions of people play a free C-ROADS game on their iPhone
- Every two weeks an analyst working for AOSIS, the island nation's advocacy group, has access to a set of graphs that shows the "state of the global deal" in Temperature and Sea Level rise terms.
- A climate advocate in China can ask "what if" questions of a free, online, international simulation tool. In Chinese.
- Google Earth includes a new feature where users can change global CO2 emissions and, via C-ROADS, see detailed maps of sea level rise and displaced populations under the scenario they created.
- Youth leaders in 132 countries run thousands of "Mock UN" summits using a free online sim, guided by a free online facilitator's guide, engaging hundreds of thousands of young leaders.
- An international network of analysts use a stable, attractive version of C-ROADS to determine paths to climate stabilization and to assess proposals, no modeler needed. C-ROADS becomes a standard and accepted tool of analysis.
- By January 2010, a similar suite of engaging tools and approaches enters the world addressing a new question: HOW to build a new economy with low-carbon transportation, electrical generation, buildings, lifestyles, and policies?

And what if a modest investment could empower OTHERS to make all this happen?

CI's Approach is to Share, Enable and Support

(Not Try to Do it All Ourselves)

Our **goal** is to do for the world of **climate sims** what
YouTube did for **amateur video**
and what
Wikipedia did for **encyclopedias**.

We will ensure top scientific standards.

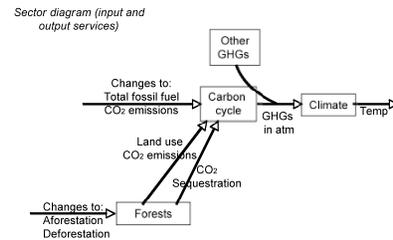

All models will be externally reviewed.

We are catalysts—here to empower creative people to translate, extend,
and improve this excellent work.

CI's Approach Enables Sharing Simulations and Media on Multiple Levels

Models

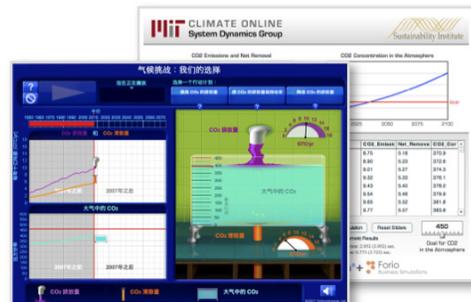

Mathematical equations

1. **Share Equations**
 - Create world class models
2. **Share Model Output on Web**
 - Expand model usage within model developers
 - Enable repurposing of model output in any program (e.g., mash-up with Google Earth)

Interfaces

Programs that allow users to visualize and study models (e.g. Flash, video games, Forio Broadcast)

3. **Share SI Code**
 - Augment model usage
 - By creating new interfaces and languages
4. **Promote Simulator Use and Dialog**
 - Facilitate climate decision making based on best information

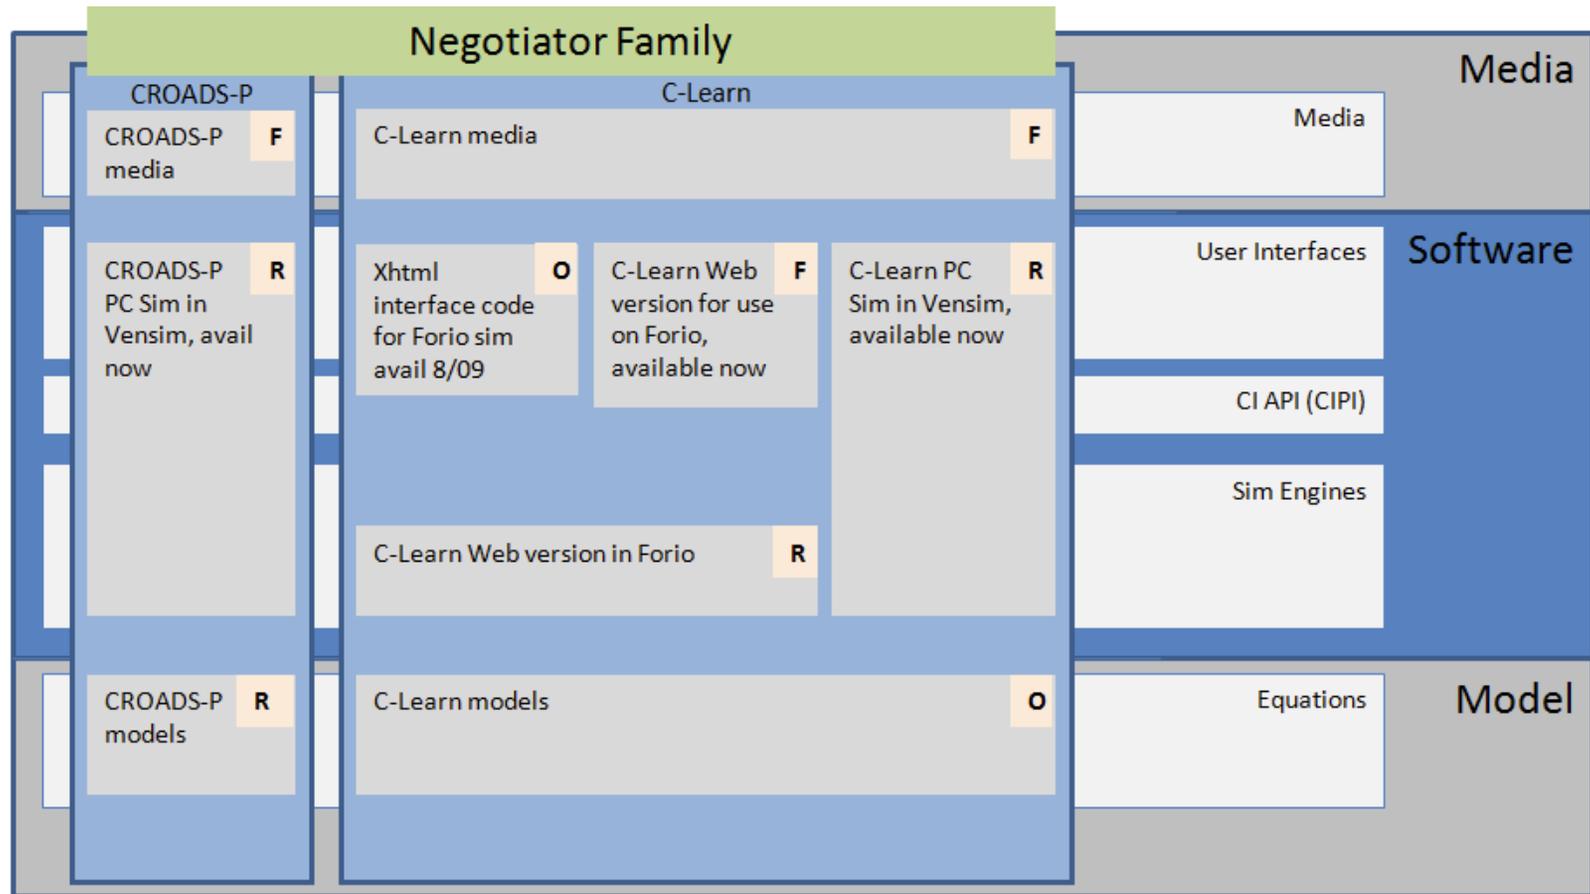

Media

Documents that explain simulations (e.g. YouTube videos, presentations, podcasts)

5. **Broaden Communication of Model Results**
 - Aggregate climate simulation materials to become knowledge center
 - Communicate model results broadly for layperson use

Our Technology Strategy Identifies Different Versions of the Sim with Different Levels of Access to Partners

Levels of Capability

- **-P Professional** version designed for sophisticated but common use
- **-L Lightweight** version suitable for learning and common use
- **-S Special** purpose, custom designed for specific audience

Key for Classes of use:

- **F** Free to download or use
- **O** OSL (open source licensed)
- **R** Restricted

We are Aiming Beyond C-ROADS: CI Currently has Four Broad Types of Climate Simulations ...

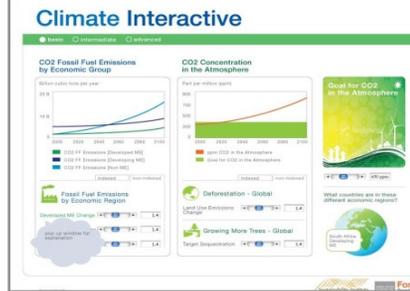

The Motivator

- Simple models that explain the unexpected consequences of climate impacts

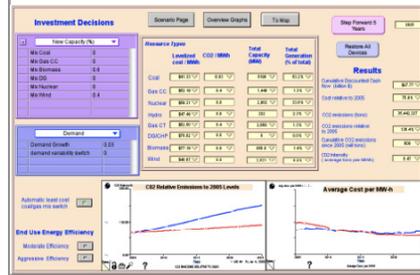

The Negotiator

- Models that help multiple parties play 'what if' games to understand their actions impacts

The Regulator

- Models that take into account government or other regulatory actions to assess best courses of action

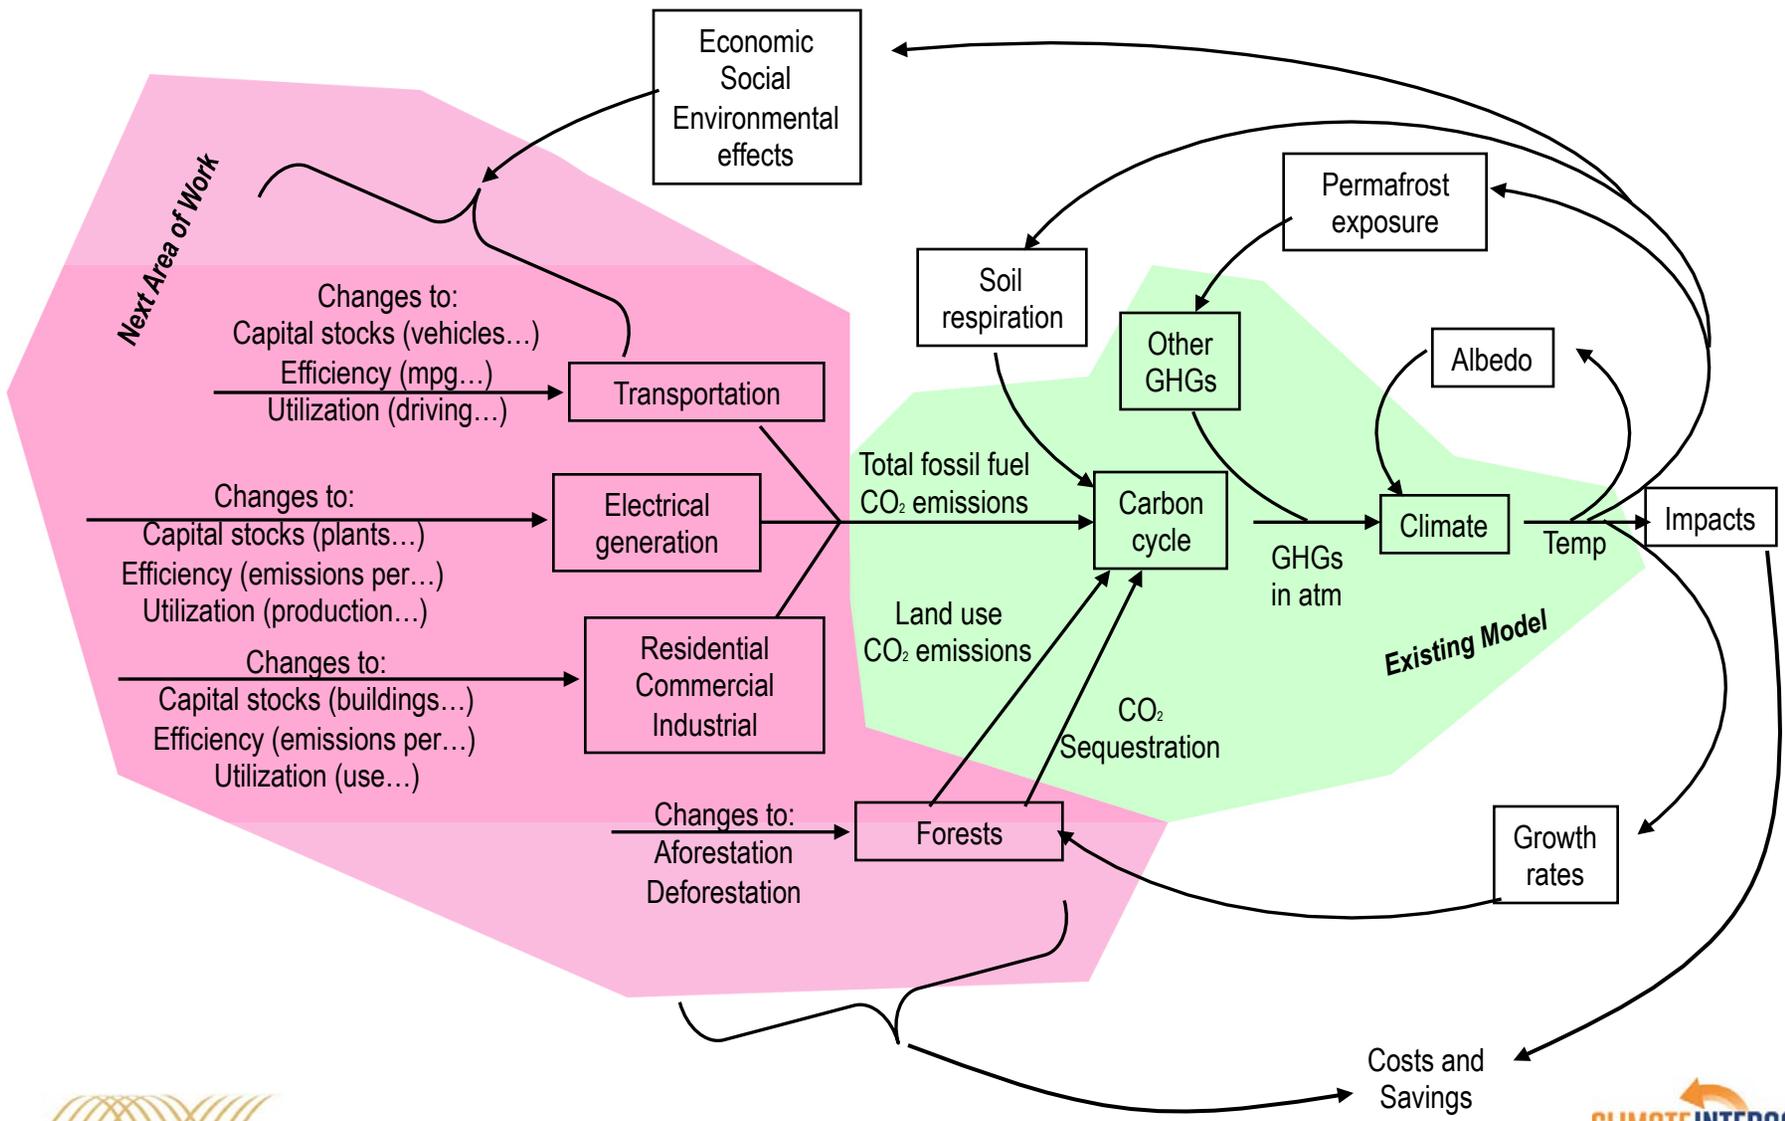

The Investor

- Models that help make wise investment choices and reduce risks of non-optimal plans...or worse

Proposed Data Center Simulation

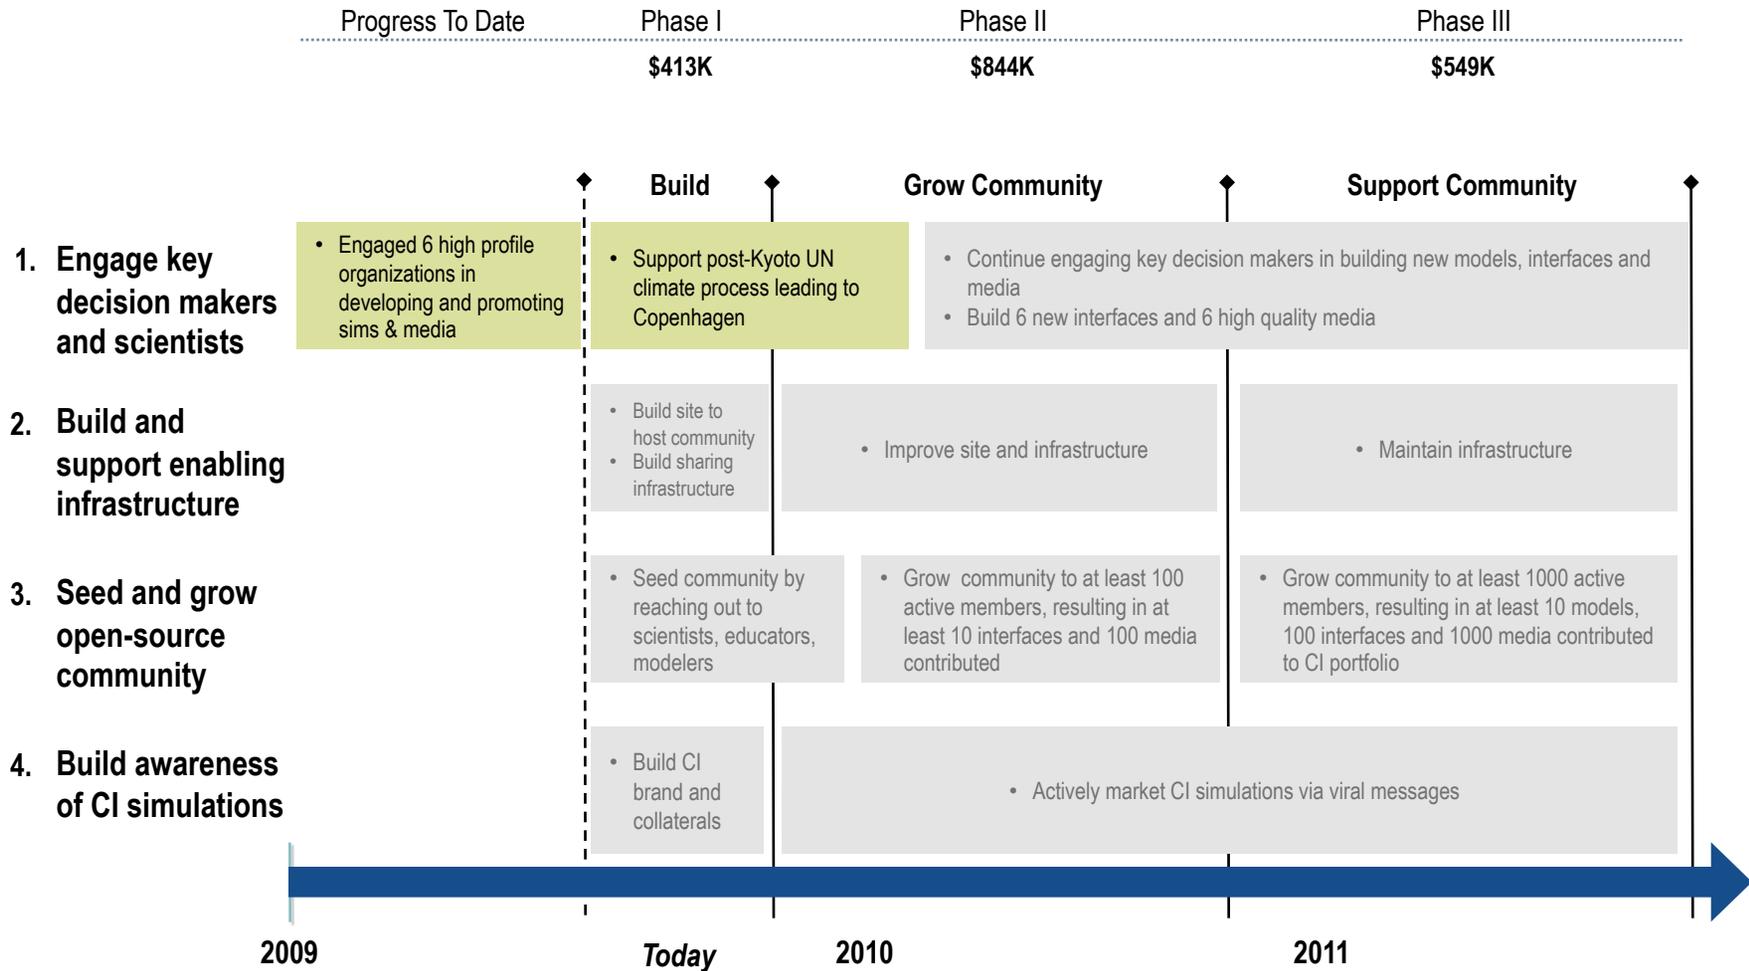

... that can be extended with new science, additional user interfaces, as well as added functionality unique to a particular domain

Next Simulation Underway: How to Reduce Emissions and Improve the Economy?

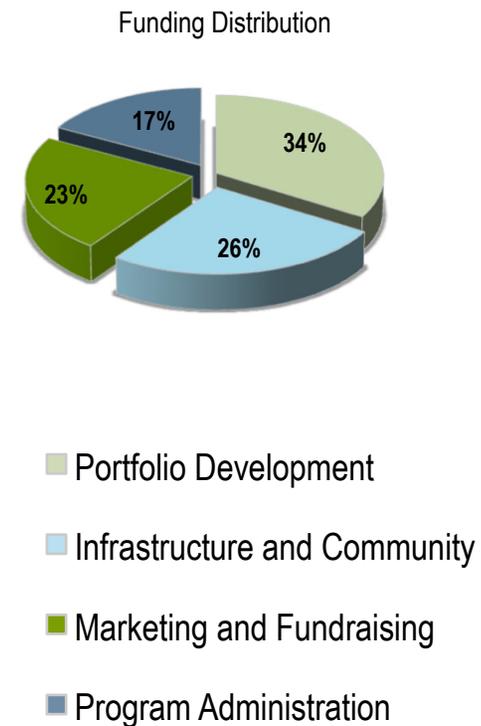

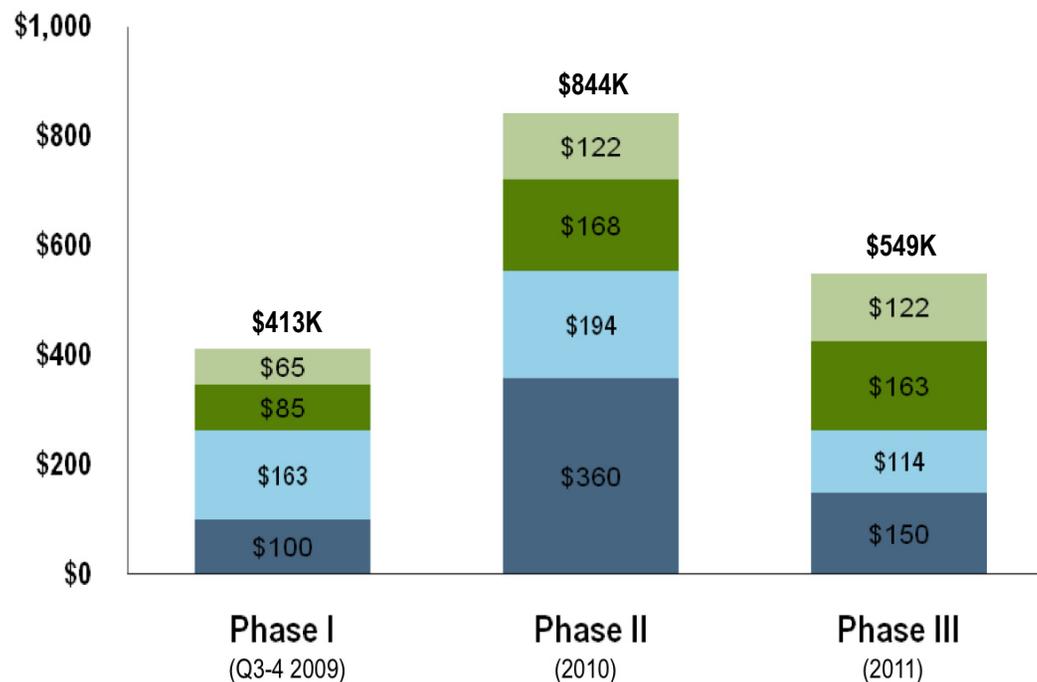

CI Plans to Further Augment its Tools, Science and Community of Partners

Funding Status
■ Funded ■ Unfunded

To Bring the Capability to Market, CI Seeks \$1.8M in Funding Through 2011

Climate Interactive Funding Needs

Key Areas of Budget over 2.5 years

- Create and support the “open architecture” infrastructure and community
 - ~\$1.7 million (see breakdown on previous page)

- Core work on C-ROADS and the Next Emissions Reduction Simulator
 - Improve, update, and document the C-ROADS simulation
 - ~\$500k

 - Engage global decision-makers with simulation-based strategy sessions and the policy exercise towards policy and behavior change (with the Climate Action Initiative)
 - ~\$600k

 - Engage global civil society, media, and NGOs with online simulations and simulation results and analysis
 - ~\$400k

 - Extend C-ROADS and develop new engagement approaches
 - ~\$1 million

There Are Also Specific Products We Hope to Create

- Develop online documentation, “presenter coaching” and curriculum development for C-ROADS simulation
 - ~\$50k
- Support creation of the “Facilitator’s Guide” and facilitator trainings/webinars to the “Mock-UN” policy exercise, “The Copenhagen Climate Exercise.”
 - ~\$30k
- Develop 4 flash animations of the key simulation results (similar to the Tufte-inspired “Climate Momentum and Dynamics”)
 - ~\$120k

We Have 5 Sponsorship Levels for Climate Interactive

Friend	up to \$10k	Listing on website
Sponsor	\$25k	Listing on website and in materials
Sustainer	\$75k	Logo on presentations, materials and website
Benefactor	\$200k	Plus offer of private webinar training/presentation session for unlimited participants
Endower	\$500k +	Plus seat on “Board of Advisors” for Climate Interactive

We are a registered U.S. not-for-profit organization.

All contributions are tax-deductible as allowed by law.

We are a Growing Coalition With a Shared Mission to Deliver Tools to Enable Climate Stabilization

Business Organizations

Academic/Science Organizations

Not-for-Profit Organizations

MISSION

To enable and support a community that creates, shares, and uses credible simulations and media to improve understanding of climate dynamics and accelerate action towards climate stabilization.

SATURDAY-SUNDAY, DECEMBER 19-20, 2009

THE GLOBAL EDITION OF THE NEW YORK TIMES

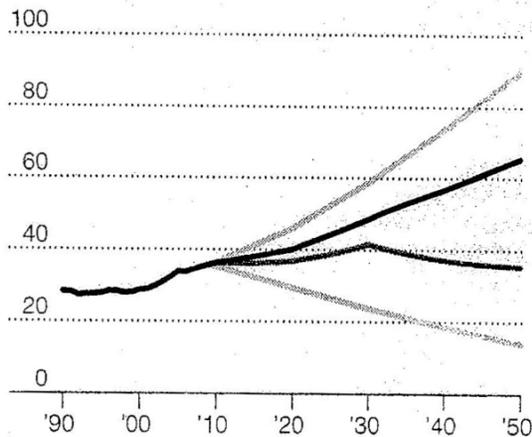

GLOBAL.NYTIMES.COM

Will it be enough?

The chart shows the estimated impact of proposals put on the table by major countries in Copenhagen. "Business as usual" is what the Intergovernmental Panel on Climate Change believes will happen if no effort is made to curb emissions. Confirmed proposals are official pledges, while potential proposals include reductions merely under consideration as well as those with conditions. The low-emissions path is roughly the amount of reductions scientists say are necessary to limit the rise in global temperatures to acceptable levels. A substantial gap remains between that level and what has been proposed so far.

Global emissions of CO₂

In billions of tons, annually

Source: Climate Interactive's Climate Scoreboard

Atmospheric CO₂ in 2050

In parts per million

	CO ₂	CO ₂ equivalent	Temperature increase*
"Business as usual"	965	1,410	4.8° C (2.9° - 7.7°)
Confirmed proposals	755	990	3.8° C (2.3° - 6.1°)
Potential proposals	590	725	2.9° C (1.8° - 4.7°)
Low-emissions path†	450	505	1.9° C (1.1° - 3.0°)

*Increase over preindustrial levels in 2100. †Meant to limit the rise in global temperatures to less than 2 degrees Celsius through a 50% reduction in and stabilizing of emissions by 2050.

Note: All proposals are as of Tuesday.

Where will current COP-15 climate proposals lead?

CO₂ concentrations by 2100. Graphics Based on Projections by Climate Interactive.

What should *we humans* do about climate change?

Somehow our species has to answer this question. And you can help.

Anyone—from experts to interested citizens—can use this site to develop plans for what we humans can do, select the most promising plans, and debate the plans and other issues.
